Summary

Systems engineer focused on verification and qualification of fixed-wing platforms.
Efficient at flight-test workflows, offline analysis and firmware falsification campaigns.

Experience

- Led verification and validation of fixed-wing autopilot firmware across five airframes.
- Built an offline flight-log analyser; cut fault classification effort by half.
- Owned qualification of the payload interface, including stiffness and buffeting margins.
- Defined the official acceptance criteria for first-flight readiness reviews.

Skills

Python, C++, ROS2, Gazebo, MAVLink, PX4, ArduPilot, hardware-in-the-loop, finite element workflows, requirements traceability, configuration management.

Education

B.Tech, Aerospace Engineering — certified in flight-safety verification methods.
